ACI Nutrition Network

The Patient Nutrition Care Journey
A guide to support implementation of the NSW Health Nutrition Care Policy
Version 1
Acknowledgements

*The Patient Nutrition Care Journey* resources were developed by the Agency for Clinical Innovation’s (ACI) Nutrition in Hospitals (NIH) group.

The ACI would like to thank the *Patient Nutrition Care Journey* Reference Group for their guidance and expertise in leading this project.

In particular, the ACI acknowledges the following people who contributed significantly to the development of the *Patient Nutrition Care Journey* resources and the NSW Health Nutrition Care Policy:

<table>

- Nursing and Midwifery Office, NSW Ministry of Health
Foreword

The Agency for Clinical Innovation (ACI) was established by the NSW Government as a board-governed statutory health corporation in January 2010, in direct response to the special commission of inquiry into acute care services in NSW public hospitals.

The ACI seeks to drive innovation across the system by using the expertise of its clinical networks to develop and implement evidence based standards for the treatment and care of patients.

In April 2009, the ACI (then known as Greater Metropolitan Clinical Taskforce) established the Nutrition in Hospitals (NIH) group to provide clinical expertise to NSW Health in developing an integrated approach to optimising food and nutritional care in NSW public healthcare facilities. The ACI NIH group includes doctors, nurses, dietitians, speech pathologists, consumers, academics, food service staff and Health Support Services.

The ACI, under the auspices of the Nutrition and Food Committee of NSW Health, lead the development of the NSW Health Nutrition Care Policy (PD2011_78). This policy directive was released in December 2011 and forms the framework for improving nutrition care and food in hospitals.

The provision of nutrition care and food in hospitals is extremely complex and it is a critical component of patient care. A large number of staff are involved - from clinicians, to food service and support staff, to managers and also patients and their carers. Improving nutrition in hospitals requires a collaborative and coordinated approach with hospital-wide leadership. It is everybody’s problem and therefore it should be part of everybody’s job.

This guide is a companion document to the NSW Health Nutrition Care Policy and will enable Local Health Districts to identify key processes and tasks required to ensure patients receive appropriate food, fluids and nutritional care in NSW health facilities, from admission to transfer of care. Along with the Patient Nutrition Care Journey interactive slides, it is part of the ACI nutrition care resource package that also includes the following documents:
- Nutrition standards for adult inpatients in NSW hospitals
- Nutrition standards for paediatric inpatients in NSW hospitals
- Therapeutic diet specifications for adult inpatients
- Therapeutic diet specifications for paediatric inpatients

On behalf of the ACI, I would like to thank Helen Jackson, co-chair of the Nutrition in Hospitals Group and the members of the Patient Nutrition Care Journey reference group for their dedication and expertise in developing this guide and the accompanying presentation slides.

Executive Summary

Good nutrition is important for everyone, but particularly for those who are unwell or recovering from injury. The provision of adequate, safe and appropriate food and nutrition care to patients in hospital is an integral aspect of clinical care that influences patient outcomes.

The provision of food and nutrition care to patients within NSW Hospitals is a complex process involving many steps. These include:

- Clinical assessment
- Nutrition risk screening and nutrition assessment
- Nutrition care planning
- Food and nutrition prescription
- Menu selection
- Food production
- Meal assembly and delivery
- Mealtime preparation and management
- Feeding assistance and supervision
- Communication, including clinical handover
- Monitoring of nutrition care
- Transfer of care

Food and nutrition care in hospital requires a collaborative and coordinated approach, involving clinicians, support staff, managers, patients and their carers. The *Patient Nutrition Care Journey* outlines the key processes and tasks required to ensure patients receive appropriate food, fluids and nutritional care throughout their admission to a NSW Health facility. It is underpinned by the NSW Health *Nutrition Care Policy (PD2011_78)* and aims to support implementation of the policy within Local Health Districts.

The *Patient Nutrition Care Journey* will assist Local Health Districts to determine key processes and tasks required to further enhance the food and nutrition care provided within each of their facilities and ensure the nutritional needs of patients are met. It will

- Describe all steps in the nutrition care pathway to ensure appropriate nutrition care and food are provided
- Assist LHDs to identify gaps in service, duplication, inconsistencies
- Assist those responsible to implement the NSW Health *Nutrition Care Policy (PD2011_78)* within their domain.
Introduction - Food and Nutrition Care in NSW Hospitals

Background

Food is vital to patients in hospital. It is an important factor that influences both their clinical outcomes and satisfaction with their hospital stay. Providing good-quality food and fluids to patients in hospital is a basic requirement that helps to effectively managing patients’ nutritional needs during their admission.

It is widely acknowledged that hospital patients are a varied group with special needs. Many patients already have, or are at risk of developing, some degree of protein-energy malnutrition. Studies conducted in NSW hospitals confirm this risk, with reports of up to 50% of patients having some degree of malnutrition. These levels are similar to those reported in other Australian studies and patients can be malnourished on admission, or become malnourished throughout their hospital stay.

Malnutrition in hospital is frequently undetected and untreated, causing a wide range of adverse consequences including:

For the individual
- delayed wound healing
- increased risk of pressure areas
- muscle wasting and weakness
- increased prevalence of both adverse drug reactions and drug interactions
- infection
- dehydration
- impaired mobility
- diarrhoea, constipation
- impaired metabolic profiles
- apathy and depression.

For the health system
- increased lengths of stay
- increased rates of readmission
- increased costs
- greater antibiotic use
- increased complications
- increased clinical intervention
- increased staff time per patient.

Investing in food and nutrition care in hospitals leads to benefits for both the patient and the health system.

Multidisciplinary patient centred care

Providing the right food to the right patient at the right time is an important part of the complicated nutrition care process. Supporting patients to consume their meals is critical to their clinical care and the provision of high quality food and nutrition care to hospital patients is highly complex. The entire process requires collaboration between clinicians, support staff, managers, patients and their carers. Each one has specific tasks and responsibilities within the Patient Nutrition Care Journey.
Preparing this guide

In 2009 the ACI (then known as the GMCT) established the Nutrition in Hospitals (NIH) group to address the delivery of nutritional care in NSW public hospitals. This group has facilitated the development of a suite of documents and policies related to food and nutrition care in hospitals, including the following:

- NSW Health Nutrition Care Policy (PD2011_78)\(^1\)
- Nutrition standards for adult inpatients in NSW hospitals\(^3\)
- Nutrition standards for paediatric inpatients in NSW hospitals\(^2\)
- Therapeutic diet specifications for adult inpatients\(^3\)
- Therapeutic diet specifications for paediatric inpatients\(^4\)

The new Nutrition standards and Therapeutic diet specifications for NSW hospitals are important in ensuring that patients have access to the food and nutrition they need while in hospital. However, they are only part of the process to improving food and nutrition care.

The NSW Health Nutrition Care Policy and the Patient Nutrition Care Journey provide the overarching framework for improving food and nutrition care in hospitals. This guide, along with the accompanying interactive presentation slides, was prepared by an expert reference group consisting of representatives from clinical dietetics, food services, nursing, speech pathology and consumers.

Initial drafts of the guide and presentation slides were circulated to all members of the ACI Nutrition in Hospitals group for comment. The final drafts were circulated to Local Health Districts via each Chief Executive for feedback. The final versions were endorsed by the NSW Health Nutrition and Food Committee, co-chaired by Dr Kerry Chant, Chief Health Officer and Dr Nigel Lyons, Chief Executive of the ACI in August 2012.
The Patient Nutrition Care Journey

The Patient Nutrition Care Journey outlines the key processes and tasks required to ensure patients receive appropriate food, fluids and nutritional care throughout their admission to a NSW Health facility. It is underpinned by the NSW Health Nutrition Care Policy (PD2011-78) and aims to support implementation of the policy within Local Health Districts.

The Patient Nutrition Care Journey from admission to transfer of care was mapped by the expert reference group to ensure all relevant stages in relation to nutrition care were identified. Each stage was then broken down into required tasks and those responsible for completing each task were identified.

Where possible, documents and resources relevant to each stage of the Patient Nutrition Care Journey have been referenced to support the implementation process.

Please also refer to the interactive Patient Nutrition Care Journey presentation slides.

**Patient Nutrition Care Journey**

**Nutrition screening, assessment, care planning, monitoring**
Will highlight undernourished patients and those at risk of becoming undernourished and who require referral to other services

**Food and fluids provided**
Access to suitable meals, special diets and fluids will be available where clinically indicated

**Mealtime environment**
The meal environment will be conducive to eating. Meal time at least 30min.

**Supervision and assistance to eat and drink**
Assistance to eat and drink will be offered

**Mealtime observation**
Will highlight if patients are at risk of becoming undernourished and if there is a need for referral to other services

**Admission**
1. Medical / Nursing/ Midwifery assessment
2. Initial Diet Order

**Diet Order**
- Nutrition Risk Screening
- Referral to Dietitian
- Referral to other services – Speech, OT etc

**Transfer of care**

Quality and safety: communication, education and training, patient feedback, clinical handover and continual clinical monitoring

**Policy and Governance**

- Nutrition and Food Governance Committees
- NSW Health and Local Health Districts
- Nutrition Care Policy
- NSW Health
- Nutrition Standards and Therapeutic Diet Specifications for inpatients in NSW hospitals
**Nutrition screening, assessment, care planning and monitoring**

Following are the relevant tasks that directly apply to the initial stage of the *Patient Nutrition Care Journey.*

<table>
<thead>
<tr>
<th>Task</th>
<th>Details</th>
<th>Completed by:</th>
<th>Resources</th>
</tr>
</thead>
</table>
| **Admission: Medical / Nursing / Midwifery Assessment** | Complete admission medical / nursing/midwifery assessment  
*Include information relating to the patients food and nutrition (eg height, weight, food allergies, dysphagia, appetite, chronic disease, assistance required for eating, feeding and drinking, social or psychological issues).* | Medical staff or nursing / midwifery staff on admission or the patient on the pre-admission form | Therapeutic Diet Specifications for adult and paediatric inpatients |
| **Initial Diet Order** | Prescribe and/or authorise the diet  
*This is based on current clinical need, medical history, and patient preference.* | Medical officer, clinical dietitian, speech pathologist or nurse/midwife | |
| | Place the diet order  
*This step informs food services about the patient’s food and fluid requirements. Placement of the diet order must be efficient, timely and safe.* | Medical officer, nurse/midwife, clinical dietitian, speech pathologist, dietitian assistant, allied health assistant or clerical staff | |
| **Nutrition Risk Screening** | Determine Nutrition risk  
*Use a validated nutrition risk screening tool.*  
Document result of nutrition risk screening in medical record | Clinical staff trained in nutrition risk screening | Nutrition risk screening tools  
Clinical practice guidelines - malnutrition |
| **Referral to a Clinical Dietitian** | Refer any patient identified at risk of malnutrition to a clinical dietitian for nutrition assessment | Clinical staff who completes the nutrition risk screening | |
| | Referral to a clinical dietitian for other reasons eg acute conditions (post gastrointestinal surgery) or chronic disease requiring dietary management (eg coeliac disease) | The referral is completed by clinical staff  
This task could be initiated by the patient/carer, clinical staff or food service staff | |
| | Conduct nutrition assessment, develop nutrition care plan and monitor progress using appropriate best practice tools | Clinical dietitian | Nutrition Assessment tools  
Clinical practice guidelines - malnutrition |
| **Referral to other health professionals** | Refer patients to other health professionals for the management of specific issues which may affect their nutrition status  
*This includes swallowing, biting, chewing difficulties, impaired function (hand, arm, shoulder or general debility), self-feeding issues, poor dentition, mental health issues or cognitive issues.* | The referral is made by clinical staff  
This task could be initiated by the patient/carer or any clinical staff | |
| **Diet Order** | Place the prescribed or authorised diet order  
*Each patient’s diet order may change several times during their admission depending on the individual. Must be efficient, timely and safe.* | Medical officer, nurse/midwife, dietitian, allied health assistant, dietitian assistant, speech pathologist or clerical staff | |
## Food and fluids provided

Following are the relevant tasks that directly apply to this stage of the *Patient Nutrition Care Journey.*

<table>
<thead>
<tr>
<th>Task</th>
<th>Details</th>

</thead>
<tbody>
<tr>
<td><strong>Patient Menu Selection</strong></td>
<td>Deliver a menu (including therapeutic menu) to the patient</td>
<td>Food service, clinical, administration and support staff or volunteers</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Assist the patient/carer to make their menu selection if required (eg where the patient cannot complete the menu)</td>
<td>Food service, clinical, administration and support staff or volunteers</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Guide the patient/carer to choose adequate food and fluids from the menu</td>
<td>Assistants with appropriate training (eg food service, dietetic or allied health assistants)</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Guide the patient/carer to choose according to the therapeutic diet and/or nutrition care plan from the menu</td>
<td>Appropriately trained clinical staff under the guidance of a clinical dietitian</td>
<td></td>
</tr>
<tr>
<td><strong>Meal Assembly</strong></td>
<td>Assemble the meal according to patients meal selections; therapeutic diet specifications; standardised portions; attractive presentation; food safety standards</td>
<td>Food service staff</td>
<td></td>
</tr>
<tr>
<td><strong>Meal delivery</strong></td>
<td>Deliver food in a polite and respectful manner</td>
<td>Food services staff (Assistance may be provided by nursing/midwifery staff or volunteers with appropriate training)</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Be responsive to inquiries from the patient/carer</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>Deliver the correct meal to the correct patient</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>Deliver the meal according to food safety and infection control standards</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>If it is identified that the patient requires assistance and/or supervision for eating</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>• do not place the meal/tray within the patient’s reach</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>• notify the nurse or midwife</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>If it is identified that the patient does not require assistance and/or supervision for eating</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>• Position the meal/tray safely</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>• Place the tray within easy reach.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>Provide assistance to open packaging if required</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
**Mealtime Environment, Supervision and Observation**
Following are the relevant tasks that directly apply to this stage of the *Patient Nutrition Care Journey*.

<table>
<thead>
<tr>
<th>Task</th>
<th>Details</th>
<th>Completed by:</th>
<th>Resources</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Mealtime Environment</strong></td>
<td>Coordinate ward mealtime to minimise disruptions; ensure sufficient staff on ward at mealtimes; identify patients who require assistance/supervision; allocate staff, carers, relatives and volunteers to meet individual patient’s needs.</td>
<td></td>
<td>Nursing/midwifery staff</td>
</tr>
<tr>
<td><strong>Prepare the patient for meals</strong></td>
<td>Clear bedside tray-table; Hand washing and toileting; Correct positioning of patient and sitting out of bed if appropriate.</td>
<td>Coordinated by nursing/midwifery staff</td>
<td></td>
</tr>
<tr>
<td><strong>Supervision and Assistance to Eat and Drink</strong></td>
<td>Provide appropriate equipment/utensils that meet the patient’s individual needs. Includes the provision of adaptive aids, cutlery and drinking devices for eating/drinking.</td>
<td>Coordinated by nursing/midwifery staff with input from appropriate allied health staff</td>
<td>Appropriately trained clinical staff, eg under the guidance of a speech pathologist for dysphagic patients</td>
</tr>
<tr>
<td><strong>Provide supervision and assistance with eating and drinking where there is clinical risk</strong></td>
<td>This requires an understanding of the risks (eg suspected dysphagia, eating disorders), and the abilities and skills to deal with the risk.</td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>Provide assistance with feeding if required where there is no clinical risk</strong></td>
<td></td>
<td>Nursing/midwifery staff or appropriately trained volunteers</td>
<td></td>
</tr>
<tr>
<td><strong>Mealtime Observation</strong></td>
<td>Ensure the patient has sufficient time to consume their meal.</td>
<td>Food service and nursing/midwifery staff</td>
<td></td>
</tr>
</tbody>
</table>
| **Observe and actively participate in the mealtime environment** | - Recognise changes to the patient’s needs/capacity  
- Ensure current nutrition care plan is implemented  
- Document observations accurately  
- Communicate with patients, carers, relatives, volunteers, and health professionals | This is the responsibility of all staff, relatives, carers and volunteers involved in the mealtime environment. |                                                                            |
| **Complete food and fluid records accurately** |                                              | Responsibility of nursing/midwifery staff (may be completed by clinical staff) | Observation / Food charts                                               |
| **Complete clinical assessment of food and fluid intake** |                                              | Medical, nursing/midwifery staff and/or clinical dietitian |                                                                            |
| **Complete nutrition assessment and update nutrition care plan** |                                              | Clinical dietitian |                                                                            |
Transfer of Care
Following are the relevant tasks that directly apply to this stage of the Patient Nutrition Care Journey where the patient requires ongoing nutrition support.

<table>
