for Clinical  
Innovation

# Background to this project

A problem

- communication difficulties for people with ID

Effective intervention

- visuals effective in aiding communication

Opportunity

- collaboration between health and disability professionals

the children's hospital at Westmead

ACI NSW Agency for Clinical Innovation

# Real Stories Real Lives

*Tony gets really distressed if **he doesn't know the person**, and when they **touch him without first explaining** what they are going to do and how. Normally people go to the doctor and **we know that the doctor will examine us**. Tony doesn't know this. So if this happens with **no warning he'll be upset** (Tony's mother).*

Innovation

# People with disabilities may have problems with communication

**Use pointing or other gestures (12mo).**

**Use single words or babble with adult-like intonation (15-18mo).**

**Speak in short phrases (2-3 yrs).**

the children's hospital at Westmead

# Limited support of children with disabilities in healthcare

- Inconsistent and limited use of visuals in paediatric healthcare settings
- Play therapists- distraction, demonstration of procedures, stories
- Little or no clinician training in use of visuals

the  
children's  
hospital at Westmead

# Visual Aids

## Needed to consider:

- Range of ways to access the visual aids (ED staff & families)  
e.g. book, PDF, ePub, video clips
- Practicalities e.g. how and when to use the visual aids?
- Supporting busy staff with key information about using visual aids
- Realities of a busy ED!

Innovation

# Sometimes just asking makes the difference

How does your child communicate?

What can we do to support them?

Is there anything you know is unsettling for your child?

the children's hospital at Westmead
